

ECHO

TECHNICAL REQUIREMENTS FOR THE SHOW

FULL VERSION

ECHO is developed within a structure specially designed for the show that makes it practically autonomous technically speaking.

NEEDS

This structure is to be placed in front of the audience in a venue with minimum **5 x 5 x 4 meters (optimum 7 x 7 x 5 meters)**.

2 220-volt direct power outlets and an XLR audio signal (L + R) send **are indispensable** on the right of the space.

Sound equipment adapted to the venue and audience is also necessary.

Setting up time: 4 hours

Dismanteling time: 2 hours

v. 20200225

Parking site for the company's van

RECOMMENDATIONS

It would be **ideal** to show the performances only for **small audiences** with a **maximum recommended audience capacity of 150 spectators** and provided that they can be accommodated in front of the structure and as far as possible **on sitting stands**.

In any case, the proper venue will clearly define the ideal capacity for the best enjoyment of all of us, although we will always try the environment to be close and intimate.
